1. Retrieve List of Books by Genre (GET /api/books/genre/{genre})

GET → URL : http://localhost:8080/api/books/genre/Fiction

2. Retrieve List of Top Sellers (GET /api/books/top-sellers)

GET → example: http://localhost:8080/api/books/top-sellers

3. Retrieve List of Books for a Particular Rating and Higher (GET /api/books/rating/{rating})

GET → example: http://localhost:8080/api/books/rating/4

**4. Discount Books by Publisher (PUT /api/books/discount)**

For example, applying a 5% discount to books from Publisher2

PUT → URL:

http://localhost:8080/api/books/discount?publisher=Publisher2&discountPercent=5

For Help: Method PUT

For a discount, paste the URL above. You can choose to change 'publisher1,' 'publisher2,' or 'publisher3.' In this example, I used 'publisher2,' which gives a 5% discount. You can modify the percentage as needed; I set it to 5%, but you can adjust it to your preference
